Find 5 examples of patterns that you find visually and/or conceptually interesting. For each pattern, find a visual reference and write 2-3 sentences explaining what the pattern is and why you find it interesting. You can use images from the web for up to 4 of these, but at least 1 should come from your daily life and be something you can take a photo of in person.

Pattern 1:

- I think it is an interesting mix of squares and diamonds. There is a clear pattern while still being visually interesting.

Randomness:

- The color of the diamonds are a bit random. Every few diamonds will have a different color than black.

Pattern 2:

- I noticed the pattern of the Hokie Stone structures when I was walking. I like the composition of this pattern.

Randomness:

- The pattern is definitely random. The rocks all have different shapes and sizes while still being compositionally neat.

Pattern 3:

- Similar to the hokie stone, I liked the look of this wall texture. It sort of has a pattern in its color how it goes along the wall.

Randomness:

- If I were to make this for the project, it would use randomness for the different noise layers. Seeing as well how some of the colors reach all the way to the bottom instead of being uniform.

\

Pattern 4:

- I really liked the simplicity of this pattern. The two color compositions were really nice to me.

Randomness:

- The randomness is pretty evident. It seems that each square/rectangle has a random offset and size.

Pattern 5:

- This is definitely the most interesting pattern that I found in my opinion. I really like the radial composition and how all the shapes interweave with each other

Randomness:

- There is not really any randomness in this pattern but it definitely could be generated using code. Maybe making the lines based on a random size of the hexagons with the hexagons getting smaller as they get closer to the center.

Part 3: Connections

Consider what you have gathered in parts one and two, the requirements for the project, and your practice in L5 thus far. Brainstorm 5 ideas for Project 2, for each include the following:

A thumbnail sketch (either physical or with ProCreate or similar)
A summary of your idea including how you will use patterns and randomization.
